

AI Readiness Diagnostic and Data Audit

Before you automate, make sure your foundation can support it.

This focused consultation helps you determine your business's readiness for AI and process automation, preventing unnecessary capital expenditure and tech debt. It provides the clarity, confidence, and strategic advantage needed for informed decision-making.

What's Included

Data Integrity Audit

- Sample review of key datasets
- Hygiene scorecard with readiness grade
- Flags for duplication, inconsistency, and siloed inputs

Process Mapping

- Identification of bottlenecks and gaps
- Evaluate workflow documentation, triggers, and tracking
- Opportunities for modular automation

Tool Stack Assessment

- Evaluation of tool access and integration potential
- Review of platform maturity and composability
- Flags for legacy systems and manual dependencies

Use Case Validation

- Confirmation of real business problems
- ROI framing and outcome alignment
- Buzzword filtering and scope control

Personnel Alignment

- Identify gaps in technical fluency, tool adoption, and change tolerance
- Flag operational blockers that may hinder AI implementation
- Evaluate whether current tasks have clear ownership and accountability

Strategic Roadmap

- Clear next steps based on readiness
- Contingency planning and phased options
- Optional teardown call or workshop

Our reports prioritize clarity and impact. They offer thorough critical insights, yet are streamlined for quick comprehension. We highlight key findings with concise summaries and visual cues, enabling easy scanning, sharing, and actionable decision-making for both team briefings and executive leadership..

This diagnostic turns uncertainty into clarity - and gives you a roadmap that scales.

Core Pillars We Assess

Pillar	What It Assesses	Why It Matters
Data Integrity	Clean, consistent, unified data	AI needs truth, not noise
Process Clarity	Documented workflows and ownership	AI can't optimize chaos
Tool Stack Maturity	Modular, automation-friendly platforms	AI thrives in composable environments
Team Alignment	Shared goals and KPIs	Misaligned teams sabotage smart systems
Use Case Clarity	Specific, measurable problems	"We want AI" isn't a strategy
Change Readiness	Willingness to adapt and iterate	AI is a mindset shift, not just tech

Sample Data Audit Scoring

✔ Ready for Automation	⚠ Needs Cleanup or Modeling	✗ Not Usable Without Major Overhaul
- Structured, tagged, and centralized - Minimal cleanup required - API-accessible and traceable	- Inconsistent formats or missing fields - Siloed sources or partial access - Requires transformation before use	- Manual entry, duplication, or legacy formats - No audit trail or schema - High risk of model drift or failure

Ready to Build Smarter?

Before you invest in automation or AI, make sure your foundation can support it. Our AI Readiness Diagnostic gives you clarity, confidence, and a strategic roadmap - without the guesswork or commitment of a full build. **Schedule your diagnostic today and start building with precision.**
